

CALADAIR

NOUVEAU!

ROUE A SORPTION

**CENTRALES DOUBLE FLUX
ECHANGEUR ROTATIF**

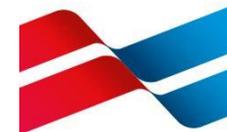

AVANTAGES

Notre programme **Bluetech™**
CALADAIR ECONOLOGIC SOLUTION

certifié

s'enrichie pour nos gammes de centrales double flux à échangeur rotatif (FREETIME™, HEXAMOTION™ et EXAECO™) d'une version « S » intégrant des roues à SORPTION (condensation en standard).

Avantages :

Dans le cas de la zone climatique tempérée en Europe ❶, la roue à sorption à confort thermique équivalent permet de générer des **gains énergétiques** de l'ordre de **12,5% en hiver** ❷ et de **65% en été** ❸.

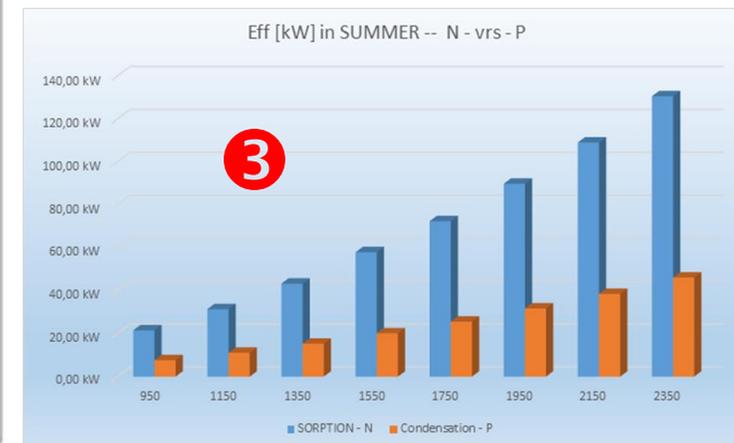

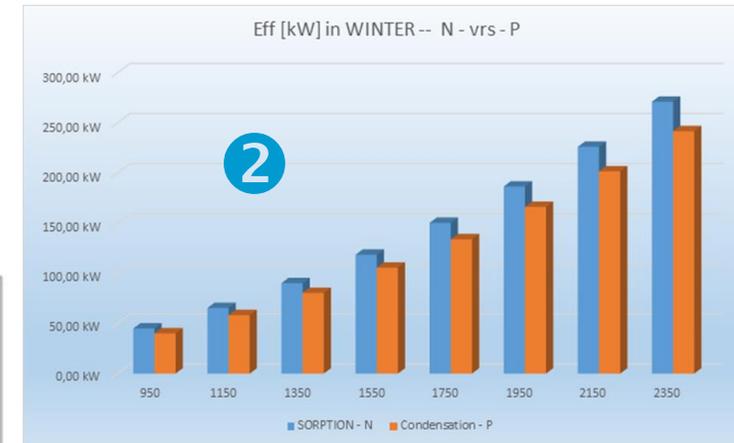

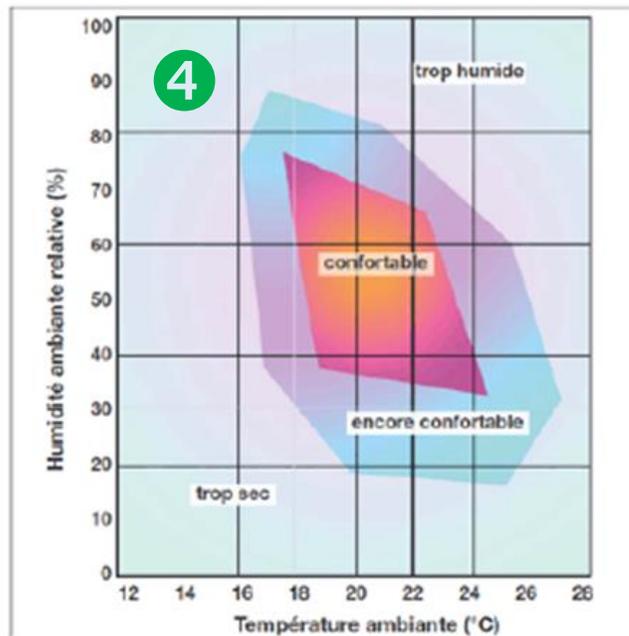

Parallèlement à ce gain énergétique, la roue à sorption permet également par l'exploitation de l'humidité de l'air de créer une **ambiance intérieure** située dans la **zone confortable** ❹ pour le **bien être** des occupants.

Nota : ces gains énergétiques sont décuplés dans la zone climatique tropicale ou le rapport température extérieure/humidité est bien supérieur.

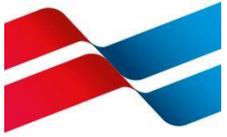

Par ailleurs, pour les zones extrêmes du nord de l'Europe, la roue à sorption permet également de supprimer le risque de condensation en fond de centrale.

La sélection des centrales dans notre logiciel **SOFTWAIR™** sera disponible dès le 15 avril. Une information vous sera adressée.

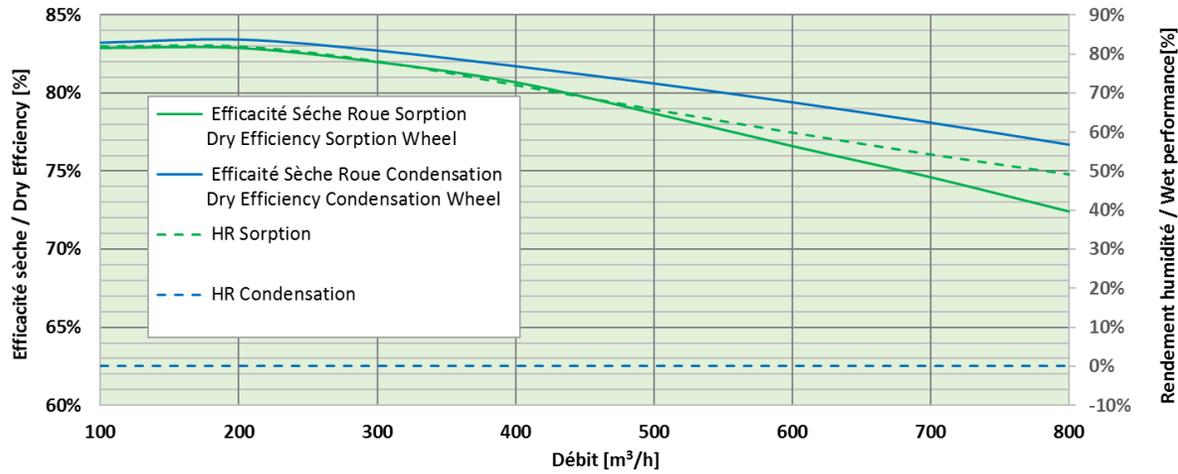

SAISON	EXTERIEUR	INTERIEUR
HIVER ❶	-10°C - 90%	20°C - 50%
ETE	32°C - 40%	24°C - 50%
